

Breathe life
into your designs
with Lumion

What is Lumion?

Lumion is intuitive visualization software designed to meet the evolving needs of architects, from the one-person practices to the largest firms in the world.

Lumion fits seamlessly into design workflows and makes rendering an integral part of the process.

Whether you use it for developing your design or presenting images, fly-through videos or immersive 360 panoramas to clients, Lumion makes rendering simple and enjoyable.

No matter your experience with rendering, Lumion helps you bring your designs to life and tell a story about your design that will captivate and inspire.

What makes Lumion different?

Lumion is not your typical architectural visualization software. It's different.

With Lumion, rendering now feels like an intuitive and inspiring part of the architectural workflow. It creates clarity around the design and ignites emotion during every step of your process, from your very first ideas to the client-worthy final result.

The moment you turn on Lumion and import your 3D model, you'll feel like you've entered a delightful, easy-to-control world, one that brings a higher level of satisfaction and success to the process.

Within minutes, you'll be showing your design exactly as you imagine it — full of beauty, atmosphere and emotion.

A world of context at your fingertips

Lumion allows you to create a world of context and surround your design with atmosphere and emotion. The setting, its environment, the subtle details — they all matter to bring your design to life. To create atmosphere. To give spaces a sense of scale and possibility.

With Lumion, you can create a world of context and capture the details of life that show the full potential of your design.

You can reveal the rough textures of your building materials or show the elegance of glass facades.

Make soft winds blow through the trees or create a sunset and illuminate your interiors.

Show the atmosphere in your design with changing weather; go from a bright morning sky to a moody afternoon rain in just a few clicks.

Render the serene atmosphere of a lazy Sunday morning or the buzz of a Saturday night in the city.

Whatever the emotion you want to convey, you can render it with ease.

Capture the details of life

It's the details that matter. They help anchor your design to a time and place; they give spaces a sense of scale and potential.

Lumion gives you a wide range of possibilities to add a surprising amount of detail to your designs and capture the subtle elements of life.

Add style and personality to your interiors with

furniture objects, appliances, decorations and lighting fixtures that will make spaces feel warm and inviting.

Place characters in context to create a sense of scale, movement and familiarity to the story you want to tell. Add nature details — plants, bushes, flowers, grasses and rocks — to make your design more colorful and vibrant.

Create atmosphere. Ignite emotion

Rendering is more than showing form and function. With dozens of atmospheric and cinematic effects, you can create a distinct mood and feeling that is bound to capture attention and delight audiences.

Balance light, depth and realism in your design with the click of a button and create a realistic or conceptual style of presentation.

Make your design feel cozy and warm, or cool and crisp, with countless lighting options, including spotlights, omni lights and area lights.

Reveal the process behind your design's development or construction in a captivating way with animated phasing. Show how the parts of your building connect and interact, creating a dialogue with the viewer. You can make stunning orthographic views with lively plans, sections and elevations that add life, color and texture.

With Lumion, your design is always unique. Personal. And full of life.

An integral part of your workflow

No matter your experience with rendering, Lumion is simple to use, easy to learn and satisfying when you need stunning results, fast.

Lumion's accelerated rendering speeds mean that you can quickly create renders at any stage of the design's development. Even if you're testing an idea, Lumion makes it possible to bring that idea to life

and continue to iterate — without wasting a moment's notice.

Whether it's the first phase of the design's development or the big presentation, Lumion enables you to create a more collaborative space and more closely involve your client in the process from ideation to the final result.

Lumion saves precious time when developing the model because it's compatible with most CAD and 3D modeling software.

You can import your own models and start rendering immediately, or set up a real-time LiveSync connection to model and render simultaneously

with SketchUp, Revit, ArchiCAD, Rhino, AutoCAD, Vectorworks and others.

Lumion also works with any file type. Import 3D building models, unique furniture models, custom textures and any other items that fill spaces with life and personality.

Which Lumion is right for you?

With exciting new features released every year, a continuously growing content library of models and materials, and a worldwide community of impassioned users, Lumion brings simplicity and joy to the art of rendering.

Lumion is available in Standard and Professional editions.

With the Lumion Professional edition, you get access to the entire range of exciting features and effects, such as the volumetric spotlights effect, fine-detail nature items, animated phasing, OpenStreetMaps, photo matching, PureGlass and more. Lumion Standard has a limited selection of effects and 1/3 of the entire content library.

Imagine. Create. Render.
Faster than ever before.

Lumion visualization software makes architectural rendering within reach for any architect. You can explore concepts and design ideas by bringing them to life early in the design's development.

When meeting with clients and other stakeholders, Lumion gives you the tools to tell a professional,

yet emotional and cinematic, story about your design. There's no limit to what you can imagine, create and render.
